SKILLS

S

C# ASP.Net	
AngularJs	
Javascript	
HTML	
React.js	
CSS	
SQL	
UCommerce	
Umbraco	
RavenDB	
Elasticsearch	
EPiServer	
Vue.js	

STATEMENT

S

Competent full-stack developer with more than 5 years' experience in multiple JavaScript frameworks, SQL & C# ASP.NET.

- Experienced in working with many different technologies
- Good at developing features with end users in mind
- Works well in agile development teams
- Used to working and communicating directly with customers.

EXPERIENCE

E

Full-stack developer

02/2022-7/2022

Pentia / Remote Freelance

In the time I was at Pentia I worked on two projects, the first one was an all frontend assignment, with vanilla html, JavaScript and css, though some jQuery was used in that project. I had to build the top navigation for [Eldresagen.dk](https://eldresagen.dk), which was built from a design made in Figma. I had to do all the html, JavaScript and css work to make this, and then at the end I worked with a backend developer who knows Sitecore to make sure everything was set up with Sitecore.

The second project I worked on was webshop.struers.com and I was initially placed as a backend C#/SQL developer. My assignment was to integrate data the customer had from their existing website and import it into Umbraco with UCommerce. I constructed the queries for the database to get the relevant data for UCommerce and make sure everything was hooked up to be able to search the products from the website through UCommerce. Later I was also assigned some frontend features, which was coded in React.js and Next.js and there were also some styling work. These components were also set up with Umbraco to be able to use them in the CMS.

- Working in an agile development team using Azure DevOps with biweekly sprints, daily standup etc.
- Code review was an essential part of working at Pentia, both my code was reviewed and I also reviewed other developers work.

PHP	
Swift	
Next.js

Esignature / Remote Freelance

I was initially hired as a front-end developer for Esignatur, but within the first month I was working as a full-stack developer using my ASP.Net Web Api experience. The project was set at 3-6 months; however, they extended the work, because of my knowledge and skillset. The project consisted of finishing an electron-based desktop app made with AngularJs. The backend work also involved working with RavenDB

- Responsible for developing features, fixing bugs and releasing updates
- Worked in an agile development team with sprints, daily standup etc.
- Code review was an essential part, I reviewed other developers code and they reviewed my code.

Full-stack developer

01/2020-10/2020

Self Employed

I made membership.stickandplan.com where I created the backend infrastructure with Microsoft Sql Server and C# ASP.Net MVC/WebAPI with a desktop app for uploading data, and made the frontend using the AngularJs framework, HTML, JavaScript, Typescript and CSS. The payment processor used was Stripe with Octobat for tax collection.

Full-stack developer

04/2016-12/2019

Vertica - Bolia /Aarhus

I worked for Vertica working on the Bolia Project, one of the biggest e-commerce websites in Denmark. The Bolia project is an EPiServer CMS solution with AngularJs as a frontend framework, hosted in Azure. I worked on both the EPiServer backend, with ASP.Net MVC/WebAPI as well as frontend work with AngularJS, Typescript, HTML and CSS. Furthermore, I also did some integration work with Microsoft SQL and Elasticsearch.
